

Anti-Dumping Commission Verification Statistics

Fig 1: Verification Timeliness

Fig 2: Exporter Onsite Verification Coverage

Fig 3: Export Value Coverage

Explanatory Notes:

1. Figure 1 demonstrates the timeliness of conducting and reporting on onsite exporter verification visits. This data reports the financial year in which onsite verification was conducted with only completed verification programs represented (including all case types where verification has been conducted onsite). The visits conducted shown in figure 1 (green markers) are not the same as the visits conducted in figure 2, 4, 5 & 6 (green bars) as the earlier graph includes all on-site exporter visits (i.e. for all case types), and it may represent some verification activity conducted in a different FY to that which the case was initiated in.

2. Figures 2-9 demonstrate the onsite exporter verification coverage for investigations, continuations and review cases conducted by the Anti-Dumping Commission in each financial year. This data is presented in terms of cases initiated in a given financial year, with only completed verification programs represented. This data represents exporters who cooperated in investigations, continuations and review case types only. It excludes accelerated reviews, duty assessments, exporters not selected when sampling is conducted and exporters who did not cooperate with the Commission. It is expected that several months after the close of each half of a financial year, all data on verification numbers and coverage for that period should be available for reporting.

Note for all figures, the last financial year data is a part year to the quarter ending 31 Dec 2016.
